<b>Activity</b>	<p><b><u>START SOTF Team 6 Activity:</u></b></p> <p>SOTF#6 Kevin Johnson (START), Enbridge Team Lead Loren CaSale, and Leica operator Amber McDougal performed poling at 31 total locations. A total of 4 location had an overall submerged oil category of heavy, 3 locations had an overall submerged oil category of moderate, and 14 locations had an overall submerged oil category of light. Ten (10) locations indicated no signs of submerged oil.</p> <p>Generally, more light oil sheen was observed along areas of sand substrate with more moderate and heavy oil sheen observed along silt/soft substrate. Globules up to 1.5 cm were identified in locations having soft and silt based substrate.</p> <p>Three (3) of the 31 locations SOTF #6 visited registered below the minimum temperature requirement of 60 degrees F. Observed temperatures ranged from 57.9 to 73.5 degrees F.</p> <p>Poling operations were not significantly impacted by vegetation or environmental conditions within focus areas. SOTF#6 was able to successfully navigate to all tasked poling reassessment locations.</p>			
<b>Health and Safety</b>	None			

<b>Issues</b>	
<b>Comments</b>	Observed heavy signs of submerged oil tended to be limited to areas of soft/silt substrate associated with sloughs and tributaries. Sand bars and areas associated with the main river channel generally tended to indicate light signs of submerged oil.
